<http://www.fallingdutch.de>

download it and run (as root eg by using sudo)
dpkg -i ultimate++_0.611-2_amd63.deb or
dpkg -i ultimate++_0.611-2_i386.deb

then start TheIDE by typing theide

have fun
Bas

Hi Bas,

I've tried your distro.
If I type 'theide' nothing appear. But there is a link in my start menu (Kubuntu 5.10) to the previous theide of 605 version that run theide of 611-dev2. It works OK but my app that yesterday was compiled in good manner by the exe of theide-605 and source of 611-dev2 now signals problem with the Xau library.
Where uppsrc is installad by your .deb package?

Luigi

Luigi

Please forget everything. It works! It was a bad setting in release mode in Output Mode while I believed was on that in the Build Method (that two duplicated panels are a bit confusing, perhaps the setting of standard release in Build Setting can be completely removed as it is overrided by that in Output Mode).

The .deb install easily. It should be nice to have one of this for each major release.

Luigi

I am glad it worked, Luigi

Well i am working on it:

1. creating a dev-Version each Monday like for Windows
2. creating "official" (means following the rules of debian) Packages for the major releases, so that one time ultimate++ is part of debian and ubuntu

Bas

PS: like Mirek said: your feedback is always the first - thanks a lot for that!

Hi Bas,

I tested your debian package for i386. "theide" complains: "upp directory not found". Maybe this happens because the file GCC32.bm is missing in the debian package. I've never installed ultimate before, so there are no configuration files from previous installations.

Bernd

thanks Bernd,

you are right, GCC32.bm was missing. I will release a new version soon wich will contain the GCC.bm so everything should work smooth

Bas

for updates have a look at the downloads (not on fallingdutch.de)

Hi Bas,

I have tested the ultimate++_0.611.3_i386.deb package in the download section. On my debian unstable system it works perfectly now.

Thanks,
Bernd
