\* Time "scalar" (number of seconds) changed to int64  
+ IconDes now supports export of icon.ico and png files  
+ plugin/png and plugin/z hacked to use .so libs on posix  
+ Package selection dialog improved - now it has brief and detailed list mode with package description)

Thanks,two points:

- 1.GUI theme chooser grayed out
- 2.Font chooser doesn't know Chinese font name still.

thank unodgs,watching here is one of my most important jobs every week,in your web,I found you are so productive.

ultimate++\_0.611.3\_i386.deb  
ultimate++\_0.611.3\_amd64.deb

are online,too  
should install and create a build method

Bas

PS: small diff to windows version only in theide:  
uses GCC.bm instead of GCC32.bm so on both systems the default bit is used (64bit on 64bit systems and 32bit on 32bit systems)

Ad 1. - sorry, last minute fix....

And thanks for keeping the track! It helps a lot.

I compiled this version on WinXP and MingW 4.1.1 and got an error at locations where abs() is called. The compiler complains about having two definitions for abs():

int64 abs(int64) in Defs.h  
int abs(int) in stdlib.h

I simply casted the arguments to int64, but do you also get this error with MingW 3.x version?

Matthias

C:\upp\uppsrc\Core\TimeDate.cpp(347) : warning C4244: 'initializing' : conversion from 'int64' to 'int', possible loss of data

I did not analyze the code, but it can be a problem.

Actually no (the result of expression is number of second within day, which fits in int).

I have added typecast to suppress the warning.

Matthias

Ops. Dark corners of C++ - if you try to call abs for "long" and have above two defined, you are in trouble (with compliant compilers....)
