The base Display class draws text vertically centered. This would be nice for AlignDisplay also, but renders text to its top.

I changed AlignDisplay to render text vertically centered:

In TDraw/Util.cpp, the last two lines are my changes:

```
void AlignDisplay::Paint(Draw& draw, const Rect& rc, const Value& v, Color ink, Color paper,
dword style) const
```

```
{
String s = StdFormat(v);
Font font = StdFont();
Size size = GetTextSize(s, font);
draw.DrawRect(rc, paper);
int x = rc.left;
switch(align)
{
case ALIGN_CENTER: x += (rc.Width() - size.cx) >> 1; break;
case ALIGN_RIGHT: x = rc.right - size.cx; break;
}
int y = rc.top + max((rc.Height() - size.cy) / 2, 0);
draw.DrawText(x, y, s, font, ink);
}
```

OK, I have altered Tom

Actually, I am still not quite sure what to do with T* packages - they contain both candidate stuff for inclusion into "canonical" U++ packages (e.g. Draw), the legacy stuff that is kept to keep old apps compile and quite often, simply Tom's additions to U++ I do not quite like or simply do not know about

(AlignDisplay is in the first and the very last category

I moved AlignDisplay to the Draw, but on the second though, would not it be easier to simply add

this to StdDisplay?

Plus maybe AttrText?

OK, changed. Display is now pure virtual... (may cause problems).

Thank you
We will test it next week, I think
