
Subject: Problem with sort of the array with embedded ctrl

Hello,

my arrayctrl has different columns. One of these has an optionbutton. I've activated the sort with respect some column (not that of the optionbutton). When the sort is performed everything is OK except the data in the column of the optionbutton. It seems it is non sensible to the sort. In other words, after the sort is destroyed the correlation between the data of column with the optionbutton (i.e. its state) and the rest of the arrayctrl! (please let me know if a test case is needed).

Luigi

Sorry. I am afraid we did not implemented that yet...

Something to do this evening. Thanks for pushing U++ to limits

Hopefully implemented... (was pretty messy job

Please check - I am sending you CtrlLib files replacements (but back originals!

Thanks a lot, it seems to work very well

This feature is very important and its lack caused some terrible trouble in real case.

Luigi

Hello,

that patch is very old and it is now included in the current stable release and dev version.
