Subject: PATCH: Improve quick comment/uncomment
Posted by aroman on Mon, 04 Dec 2006 05:43:41 GMT

Attached is a patch to improve the 'enclosing' ability of the TheIDE.

With the attached patch, when a block of code is selected and the user hits '/', then the block of code is commented-out by prefixing each selected line with '//'.

If the same block is highlighted and '/' is hit again, then the block is uncommented.

Similarly, if the user hits '*', selected code will be commented out using /* ... */ and hitting '*' again will uncomment.

Nice patch! However I got used to enclosing with /* */ after pressing / Maybe that could be configurable.

Ok, Daniel, please add it with configuration option
