I've read the article regarding SelfUpdate(). Is there a clearer example on setting location of new app .exe in network folders?

Thanks,

Kathrine

You create q.ini file with the content

UPDATE=P:\MyNetworkPath

Then your GUI_APP_MAIN should look like this:

```
GUI_APP_MAIN
{
    SelfUpdate();
    Update("some-other-file-needed.ext");
}
```

Hope this helps.
