About http://www.ultimatepp.org/
In addition to the Current Release at the main page, why not put info and a download link to the latest development version?

605 is "old", I think we should encourage new users to try the development version too.

Best Regards,
Yeoh

i fully acknoledge!

the dev versions are tested to run and they look much nicer than 605, which is important for guis!

Actually, this makes me worry too, and a lot.

Anyway, the right thing to do is the new release. Which is something I am concentrating on, but there is always some small problem to resolve before releasing....

but why not put a link to the current devel version?

the devels are pretty stable.

Well, I was thinking we will put there a link to 2007.1 beta indeed very soon.

That's good.

I must confess, I have product release "jitters" too but I guess there will always be just one more thing to fix. Why not just release it and get on with the next dev version. Remember that there is no end to this.

If there are no known fatal bugs, and you release a dev version sooner, more users will be able to help you test it and possibly suggest ways to fix the bugs.

Best Regards,
Yeoh
