How do I get all the files in a given directory after I get the Directory string from FileSel ?

Thanks,

Kathrine

you can use Find() method of FileSystemInfo class.
See theide sources for a reference.

Use FindFile.

```
FindFile ff(AppendFileName(mydir, " *.*"));
while(ff) {
    ... you get the name in ff.GetName() and attributes in other methods
    ff.Next();
}
```

FileSystemInfo is most likely a overkill here - it is useful for very specific situation as virtualisation of filesystem. Typical use is using FilSel to browse directory on some else computer connected via TCP/IP (only).

Huh, I didn't now that, but I use it to search for local files. Sometimes you say such amazing things about up, that totally throws me
