Another question(612-dev2):
when compiling HomeBuget I find :
MSC7.1+optimal+BLITZ enabled I saw this:

d:\ultistudio\upp\uppsrc\richtext\txtop.cpp(55) : fatal error C1001: INTERNAL COMPILER ERROR
(compiler file 'f:\vs70builds\3077\vc\Compiler\Utc\src\P2\main.c', line 148)

MSC7.1+optimal+BLITZ disabled I saw this:

D:/UltiStudio/upp/out/plugin/sqlite3/MSC71.Gui\sqlite3.lib (723274 B) created in (0:00.09)

----- GridCtrl (GUI MSC71 WIN32 MSC) (3 / 12)

GridBase.cpp

GridDisplay.cpp

D:\UltiStudio\upp\uppsrc\GridCtrl\GridDisplay.iml(2) : error C2001: newline in constant

.....

so the conclusion: "newline" does have some relation with BLITZ

Well, that internal error is known problem, simply a bug in msc. But Optimal and BLITZ are not a good combination anyway (longer executable).

As for "new line in constant", that one is our well known problem with chinese XP. Looks like .iml is in old format; converting into new one should solve that.
