Can the error messages in the output screen be made active to the right mouse button. In that clicking goes to the file / line where the error occured.

Would save a lot when debugging.

Why is not double-clicking/F4 good enough?

Mirek

Right click should not be used here. In most application I know it is used to show popup menu, not to invoke immediate actions.

I now realise having played with the IDE that the left mouse button does just what I want.

Item can be closed
