Subject: QTF-table: Cell-span problem

UPP is a very useful library, but I found a bug in cell spanning of RichText tables.
I'm trying this QTF code:
{{1:1:1:1:1:1;-1 a:: b:: c:: d:: e:: f}}
In this situation the "a" cell should be larger and the next cell should be "c" with normal size.
But the current behaviour is, that "a" is in normal size and "c" is larger.

Uhh this is not a problem if I add a second row. Sorry for this topic.
