I can create my own layout, I mean insert a new one in the project.
I did this by creating with NotePad the following file
LAYOUT(cxpLayout, 464, 320)
END_LAYOUT

But I can use it in my project.
Is there a automatic way to do so.

Hello,

Please read the answer in the previous thread. Why do you use notepad? (it seems you are having my same troubbles of many monthes ago ). It's very, very easy. Please read the article I've suggested.
