The problem is caused by:

```
void ListViewer::Paint(Draw& draw) {
 Size sz=GetSize();
 draw.DrawRect(0,0,sz.cx,sz.cy,SBlue);
 if(!cl.IsCursor())
  cl.SetCursor(0);
}
```

Altering cursor in Paint methods leads to calling Refresh, which makes the whole painting system confused...

(Yes, it is repainting bug, clicks are in fact OK, just the ColumnList does not get repainted).

Mirek

Update: After further thinking, while your code is unusual, U++ should cope with it (and it does in win32). Will fix that ASAP.
