Adding libraries was discussed in detail several times here.

Basically, compile it to linkable form, then add in package organizer.

Use search the forum for details.

Saludos!!!
Could you please tell how to add all libraries including into GNU/linux in order to be able to work in Ultimate++. For example
I want to use Cairo, librsvg, cairomm, cairo-librsvg in such a way that i will be able to compile it my project in Windows and linux as well.

Use "When" condition to add specific versions of libraries in specific environments.

Mirek

It's me again... and i am sorry for the question but i'm kindy of new in ultimate++ and there are still some thing which i don't really quite get.
This is my problem... Since i have been trying to use the Cairo lib in order to be able to open and draw a SVG file using U++. I have been including the library using the Build Methods, for example in the INCLUDES i typed this "/usr/include/cairo " along this in the LIB i typed this path "/usr/lib". Also, using the package organizer in the WHERE i typed LINUX and finally in the LINKS OPTIONS "/usr/lib" and it seems to me that it recognize the Cairo.h, but the problem comes out when i am trying to use everyone of its methods and functions, because it throws out this error:

```
----- Core ( GUI GCC DEBUG SO SHARED BLITZ LINUX ) (1 / 9)
cd /home/rurbina/upp/uppsrc/Core

Hello,

you need to tell the linker explictly which libs to link to.
It can not figure that out from the headers alone.

So in the link line you need -lcairo or better
`pkg-config --libs cairo`
(notice: must use back-tick not quotes).
Also
`pkg-config --cflags cairo`
is the saver strategy for header inclusion.

Guido

I am afraid this would not work with current TheIDE.

Instead, simply put "cairo" as library in package organizer to your main package (or package that needs to link with cairo).

Mirek
