In gccbuilder.cpp is missing compression routines on non-array Binary objects.

here is the correct part:

```
 else {
  BinObjInfo::Block& b = belem[0];
  fo << "char " << ident << "[] =\n";
  String data = ::LoadFile(b.file);
  if(data.IsVoid())
   throw Exc(NFormat("Error reading file '%s'", b.file));
  if(data.GetLength() != b.length)
   throw Exc(NFormat("length of file '%s' changed (%d -> %d) during object creation",
    b.file, b.length, data.GetLength()));
  switch(b.encoding) {
   case BinObjInfo::Block::ENC_BZ2: data = BZ2Compress(data); break;
   case BinObjInfo::Block::ENC_ZIP: data = ZCompress(data); break;
  }
  fo << AsCString(data, 70) << ";\n\n"
  "int " << ident << "_length = " << data.GetLength() << ";\n\n";
 }
```

MikeP

Well, I think that release was in fact done before I have applied the patch.
