Is there a way to create a Sizable layout with two LabelBoxes in a way that when I resize the window, the first LabelBox always occupy the left half of the window, and the second LabelBox occupy the right half of the window? This can be done with Qt.

I think, you can use Splitter class to achieve this.

No. In this case, you have to add more code to achieve this behaviour.

Actually, there is nothing complicated in providing appropriate logical coordinates (althought extending them to support this would increase sizeof(Ctrl), which is quite critical value to be kept low), however the real problem is how to reflect it in layout designer....

In most cases where you need this, using Splitter is even better solution.
