Subject: assign enum to variable?

Shouldn't you be able to enumerate a variable, like so?

enum Bool { FALSE = 0, TRUE }

When I try to do something similar it does not complain, however when I try to access one or the other (e.x. Bool.TRUE), I get a compilation error:

error: expected primary-expression before '.' token

Upon further experimentation, I see how this should be used, and that this particular usage wouldn't be all that useful after all.
