---

The code generated by the layout editor..

```
LAYOUT(sudokuLayout, 308, 216)
  ITEM(Button, dv___0, LeftPosZ(12, 88).TopPosZ(12, 40))
END_LAYOUT
```

Sizes and Positions generated by the designer is Zoomed.  
What if I want to do a pixel-accurate layout?

Currently I assigned controls' positions by hand.  
Is there are batter way to do this?

Thank you very much ^^

You can set zoom factor to 1:1 in the code.

Mirek
