This is a one line patch against CtrlCore/TopWin32.cpp:

51c51

```
<  ::SetWindowText(hwnd, title.ToString());
```

```
>  ::SetWindowText(hwnd, ToSystemCharset(title.ToString()));
```

Indeed. Thanks!

BTW, you seem to have mastered U++ pretty fast

Mirek

Thanks

The clear organization of upp sources and the very good build environment makes it easy to fix upp problems.

This is a very good idea to make possible to directly modify library sources and just rebuilding them automatically without the install process.

UPP is excellent!

Great! One more person that understands why U++/TheIDE is organized as it is

In fact, this is quite a problem, as most people expect to get traditional library, makefile, etc.... and refuse to try much more effective way of doing things...
