Hello,

2007beta3.

I've a gridctrl with editable rows.

During the insertion, each time i enter the character 's' the cursor suddenly escape and goes in the previous row (up)!

I've noticed this defect in this and previous version, but was absent in 612 version.

Any idea or I must post a test case?

Is there something connected with 's' that I'm not aware of it?

Luigi

Confirmed.

1. Go to void GridCtrl::Key(..).

2. Find

case K\_S:

case K\_UP:

....

3. remove line with case K\_S:

I don't remeber why it was there
