Hi.

I try to compile Ultimate++ 2007.1-beta3. When I compile tutorial Core01 I found problem running this tutorial. So, when Core compiled in DEBUG mode all is Ok, but when one in REELASE mode than DUMP, LOG and others macroses doesn't work correctly. In RELEASE mode this tutorial do not create *.log file for output and no any outputs was made...

Is it problem of Core library or Core must be compiled in DEBUG mode only?

P.S. I use ours own make system, so I need to know how I must compile Core...

P.S. I use ours own make system, so I need to know how I must compile Core...

See Core/Diag.h: LOG and DUMP are defined empty in release mode.

These are tutorial examples, LOG/DUMP only show what is in variables....
