Hello,

several versions ago with the following Display:

```
class ColoredCell : public Display
{
public:
    static bool isBlack(String s);
    void PaintBackground(Draw& w, const Rect& r, const Value& q,
        Color ink, Color paper, dword style) const;

};

bool ColoredCell::isBlack(String s)
{
    if(s[1] == 'B') return true;
    return false;
}

void ColoredCell::PaintBackground(Draw& w, const Rect& r, const Value& q,
    Color ink, Color paper, dword style) const
{
    if( isBlack(AsString(q)) ) paper = Color(255, 150, 150);
    Display::PaintBackground(w, r, q, ink, paper, style);
}
```

I was able to set pink the background of a cell. Only I saw that the color is not uniform. It does not appear under all the content of cell:

It seems a problem of transparency.
Am I wrong?

Luigi

```

I was able to set pink the background of a cell. Only now I saw that the color is not uniform. It does not appear under all the content of cell:

It seems a problem of transparency.
Am I wrong?

Luigi

This is a picture of the look with the previous release that show what I mean:

A problem in U++; now should be fixed, unfortunately, fix is quite complex.

Perhaps you can use AttrText here?

Mirek

Perhaps you can use AttrText here?

Mirek

Yes, of course...

Only now I've used AttrText for first time and it seems easier to use than Display. The above problem disappeared but I've noticed something I'm not sure is correct. I mean the color cursor is not modified when it stays in a cell affected by AttrText (see picture). Perhaps this is normal. Only the color of the text inside the cell is modified by the interaction with the cursor. But when the entire row is processed by AttrText and the cursor stay there I guess it is hidid by the paper color of the cells.

Luigi

Luigi

Well, that is the price of simplification...

Mirek
