When the code completion popup window comes up, I see this strange class name as base of TopWindow: CtrlCtrlCtrlCtrl. It is not the real name of the base class, is it?

I have a problem reproducing this bug. Do you have a stable situation when this happens?

Maybe the problem is that I use the newest TheIDE to develop an application which uses the 511 release library.

Here is how I reproduce the bug. Start a new project, choose Basic CtrlLib application. Replace the contents of main.cpp with this:

```
#include <CtrlLib/CtrlLib.h>  
class MyHello : public TopWindow {  
public:  
    typedef MyHello CLASSNAME;  
    MyHello();  
};  
MyHello::MyHello()  
{  
    Zoomable().Sizeable();  
}
```

GUI_APP_MAIN

```
{  
  MyHello().Run();  
}
```

After this start a new line with "void MyHello:". The completion popup should come up, with the bogus class name, as in the previous screenshot.

Negative. Scary... (I am most afraid of bugs like this...)

I'm experiencing the same bug from time to time. Unfortunately I was never able to find out how to reproduce it in repeatable way..

Hopefully fixed.

It works OK now for me.
