Hello,

I wonder if there is a smart way by which I can execute the predefined email client at runtime (windows/linux)... and pass it an address with an attachment.  
I would like to use the external resource and not some widget.

Luigi

I fear there's no smart way at the present moment. For Linux environment maybe you can check this thread:

[http://www.ultimatepp.org/forum/index.php?t=msg&goto=7804&&srch=portland#msg\\_7804](http://www.ultimatepp.org/forum/index.php?t=msg&goto=7804&&srch=portland#msg_7804)

look xdg-email

Ciao,  
David

I've found a smart way!  
Just insert a hyperlink "mailto:xxxxx@yyyyy.zzz" to some text in a RichTextView. By this way you can open the browser with "http://xxx.yyy.zzz". I used Topic++ to add the hyperlink.
