Hi. I want to know, if it possible, to see while debugging the registers of the stack. I took off the registers that i want to see from VS C++ 2005

ST0 = +0.0000000000000000e+0000 ST1 = +0.0000000000000000e+0000  
ST2 = +6.5504915520268907e-1074 ST3 = +0.0000000042294290e-0302  
ST4 = +4.0000000000000000e+0000 ST5 = +1.0000000000000000e+0000  
ST6 = +2.0000000000000000e+0000 ST7 = +4.0000000000000000e+0000

How i can see this registers on U++?  
Thanks for your help

Looks like you mean you're watching values on the stack in a certain format (int/double/etc). They're not registers though.

I believe that in fact, these are x87 FPU stack registers....

Well, I am adding to the ToDo list to provide some more complex "Registers" window....
