What is the current state of WinCE support of Ultimate++?

With which development environment can it be used? CE gcc or Microsoft tools?

Is it possible to compile to ARM platform?

Has somebody some experience with WinCE and Upp?

kcabobert wrote on Thu, 08 March 2007 15:18 I am curious about this as well.

Sorry for late reply, I missed this one.

Well, current state is that I had applications compiled and running on my PocketPC PDA. Not everything is perfect, it is really just initial success and will need time to refine.

This was achieved using Visual Studio 2005 Pro compiler.

I was hoping that somebody could try to adapt this project

<http://cegcc.sourceforge.net/>

for the use with U++ before we go anywhere further...

Mirek
