Subject: using the library from uvs

I am using uvs to download the latest source files. Until now I used the source files only to compile the latest TheIde. I done this by inserting a new assembly which points to c:/uvs/uvs.uppsrc. when I compiled TheIde from this assembly, it automagically used the new library. From now on I would like to compile my own applications with the newest library too. How do I do this? Should I copy the uvs directory contents over the existing uppsrc directory?

Actually, what about creating TWO asemblies, one for original 511 uppsrc, second one for snapshot uppsrc?

MyApps: C:\MyApps;C:\upp\uppsrc

MyAppsNew: C:\MyApps;C:\latest-upp\uppsrc
