there are 2 files which cause a segfault when compiled speed-optimized. I solved the problem by compiling them with a different gcc-option:

for Core/Vcont.cpp I need "-Os -finline-length=119", and
for RichText/ParaTypes.cpp I need "-Os -finline-length=141".

is my gcc-3.3.1 broken in the aspect of function-inlining?
or is it upp's fault? I guess I need a newer gcc...

-Os is `_size_` optimization.

Interesting, recently Guido reported some problems with size optimizations too... With 4.x compiler of ubuntu 610, everything seems to work fine though...

As a note, I have been reading up on cross-platform problems with -fPIC and came across specific references regarding gcc-3.3. You might want to check into that. If it will not cause problems I would suggest upgrading your compiler to version 3.4 or possibly to the newest stable 4.1. Version 3.4 would likely be safest.

thanks for the interesting comments. I'd be interested in reading up on these gcc-3.3 issues, since 3.3 is the last release-series to support certain deprecated compiler-behaviour.

in the meantime I'll upgrade to 4.1.2 -- I just wish there where some list of all open-source c++-libs so that I could find each potential incompatibility beforehand...

as for the -Os, I know that it's size-optimization, and strangely -O2 -finline-limit didn't work (is the latter parameter ignored for -O2?).

so, dear ebojd, please give me some links or google-words to find anything about problems with gcc-3.3, bugzilla isn't very helpful when searching for particular bugs. as a side-note, I did experience various problems with optimization in gcc-3.3, but that was always with some machine-dependant optimizations. so, maybe the actual bug is within upp (probably some expected behaviour was really undefined behaviour according to the gcc-developers or something).

Well, the first place I would look is the following URL which discusses gcc-3.4, but I have seen similar with 3.3. Sorry I did not keep careful notes. I'll post more if I recall them, but for now is the following:

<http://www.gentoo.org/proj/en/base/amd64/howtos/index.xml?part=1&chap=3>

As a note, I have had no problems with U++ and gcc-4.1.1/glibc-2.5

Hope this helps.
