Hi Daniel could you please supply a complete list of uppsr/* directories that should be release.

Thank you,
Bas

Warning:

In this group, whole directory is exported, including subdirectories (subpackages).

In this group, some of Web/* subpackages are omitted -> only those listed here are used (includes Web package too).

TCtrlLib;
TCore;

Just for your information.

TCore cannot be build because:
xml.cpp(1) : fatal error C1083: Cannot open include file: 'webmap_i/webmap.h': No such file or directory

TCtrlLib cannot be build because DocTypes is missing.
fatal error C1083: Cannot open include file: 'DocTypes/DocTypes.h': No such file or directory

---

TCtrlLib cannot be build because DocTypes is missing.
fatal error C1083: Cannot open include file: 'DocTypes/DocTypes.h': No such file or directory

Well, I vote for excluding these packages.

Perhaps, if anybody is using anything important, do not stay silent.

I think the one important thing is simple DBF support. I can move it to "plugin/dbf".

Mirek
