Here is a list of minor things to fix in 2007.rc3

- CtrlLib app with main window is the only .UPT using U++ having "using namespace Upp;" it should be added to others.

- In build methods, are Shared libs/All shared supposed to link U++ dynamically? If yes it does not seem to work.

Victor

I have 1 bug as well with this version:
The .pdb file sometimes gets locked and it won't let me run in debug version any more. It gives a message saying that the .pdb file cannot be accessed and to make sure that permissions are correct and etc. This does not happen all the time, but after a few recompiles and debug runs, it tends to lock up. This becomes a pain because TheIDE doesn't save the state of the breakpoints. So I have to close TheIDE, delete the .pdb file, and then reopen TheIDE with my breakpoints gone.

This becomes a pain because TheIDE doesn't save the state of the breakpoints. So I have to close TheIDE, delete the .pdb file, and then reopen TheIDE with my breakpoints gone.

Yes, I am aware about this problem, unfortunately, this is most likely a bug in MS debughlp.dll. No easy way how to fix that.

If it happens to me, I simply restart TheIDE

OTOH, I welcome everybody to check the init/exit code of debugger

in ide/Debuggers/Pdb.cpp. Perhaps I made some mistake...

- In build methods, are Shared libs/All shared supposed to link U++ dynamically? If yes it does not seem to work.

"Shared libs" means TheIDE should *prefer* shared libraries when linking (it has corresponding gcc and msc flags).

"All shared" means "Shared libs" + all packages should be compiled as .dll/.so. This is more or less experimental feature, the U++ policy is to link statically, but for debugging purposes, dynamic linking can be faster. I am afraid that at the moment, this does not work in Win32 (because of the U++ library being compiled, not TheIDE).

Thanks for the info.

I have just noticed an other issue.

If I have

class ADDONEXPORT MyClass
{
    void MyFunc();
}

and I try to "Copy as definition/declaration" MyFunc() in my C file, I'll get:

void ADDONEXPORT::MyFunc()

class ADDONEXPORT MyClass
{
    void MyFunc();
}

and I try to "Copy as definition/declaration" MyFunc() in my C file, I'll get:

void ADDONEXPORT::MyFunc()

The main drawback of current C++ parser is the inability to deal with macros....

Mirek,

Quote:"All shared" means "Shared libs" + all packages should be compiled as .dll/.so. This is more or less experimental feature, the U++ policy is to link statically, but for debugging purposes, dynamic linking can be faster. I am afraid that at the moment, this does not work in Win32 (because of the U++ library being compiled, not TheIDE).

Do you have any idea of what it would take to make it work on Win32 (In case I can find some time to look at it)?

Thanks,
Victor

Mostly to fix package dependecies.
