Hi,

I'm usin Upp 605 on a RedHat Entreprise linux 4 to to create an application which have to run on the second monitor.

When I execute the programm on the first monitor, there isn't any problem but when I execute it (or exemples from upp) on the second monitor, the main appears on the first (very degradeted) and this error is displayed a lot on the console of the second screen :
"X Error: BadMatch (invalid parameter attributes), request: X_CopyPlane, resource id: 41943066 = 280001A"

If anyone have an idea of the problem ??

Thanks in advance

Ptilo

I am afraid this is a bug in U++. We will fix this ASAP (but most likely, next version will get released with this problem).

Mirek

I am using current upp (2007.1 rc4) on Ubuntu 6.10 with dual Monitor and have no problems with it on the second screen.

could you please test wether you have the errors with 2007.1 rc4, too?

Thank you,
Bas
