This question may be too general. but I have not began coding.
Is it possible to compile a C++ program in VC++ with the header files provided by U++? Actually I just need the sql features of U++,since I only program a console application.If yes ,could you please give me a short description of how to do it or a link to such tutorial.

Thanks in advance

Well, to anwer we have to deal with two issues:

1 - U++ is strong console platform too. In fact, SQL support is GUI independent.

2 - Using U++ without TheIDE is possible, but at the moment tricky. OTOH, U++ on Win32 is best used with VC++ compiler (but not studio, just commandline tools). That is how we develop our commercial apps.

Now the quick start for SQLite development is in "reference/SQL_SQLite3" package. The source of package is also shown here:

http://www.ultimatepp.org/reference$SQL_Sqlite3.html

(BTW, it is console application).

Mirek

Below is a link to VC71 project files. A workspace includes 190 projects including examples and references.
