Hi,

What triggers tab key navigation inside e.g. ArrayCtrl and between ctrls?  
I added a layout to the StdUppApp and tab key does nothing there.  
In the sample apps I tried, tab navigation works, but I can't figure what triggers it

It is handled by TopWindow::Key.

However, the Key protocol is as follows:

The keystroke goes to the focused widget Key. If it returns false, it goes to its parent Key and vice versa. If it reaches top-level window and it also returns false, HotKey broadcast is performed recursively from top to down, until some widget returns true (or all are traversed).

Therefore, in LineEdit, Tab keystroke is used and true is returned...

Ok. StdUppApp overrides TopWindow::Key, and tab key strokes are lost there. Commented it out for now.

Guido

Perhaps it should call TopWindow::Key instead of "return true"..

Yes, thanks. I already figured.
