Can you post the source? I'll double check the ebuild and post.

Thanks,

EBo --

Bas,

The zip file appears to be corrupted. I get the following error:

```
Archive: upp-2007.1rc5.zip
warning [upp-2007.1rc5.zip]: 26726 extra bytes at beginning or within zipfile
(attempting to process anyway)
error [upp-2007.1rc5.zip]: start of central directory not found;
zipfile corrupt.
(please check that you have transferred or created the zipfile in the
appropriate BINARY mode and that you have compiled UnZip properly)
```

I'll check the tar file...

With that I get:

```
tmp> tar -zxvf /usr/portage/distfiles/upp-2007.1rc5.tar.gz
Common/
Common/Common.upp
tar: Skipping to next header

gzip: stdin: invalid compressed data--format violated
tar: Child returned status 1
tar: Error exit delayed from previous errors
```

I'll play with it more later.

Thanks,

EBo --

Which .deb and which error, Luigi?

.zip and .tar.gz are uploaded again

Bas

Hi,

the i386 one. I've downloaded two times and tried with two different installer. I do not remind exactly the message but they said that the archive were not a valid tar/deb archive, and that could be a ASCII file... or something like this.

I guess the file were uploaded not in binary form.

Bas

OK, the 386.deb version works... even a previous and mysterious bug seems disappeared in my apps.

Just a note. During the installation it is created the assembly MyApps but no folder is created. I would like to suggest to remove it or create a folder MyApps.

The download worked, ebuild came out fine, and the portage source is uploaded to sourceforge.

Hi,

If you mean the central panel with icon list and color selector instead I see it (386.deb). I'm using the ide coming in the package.

Hi Guido,

guido wrote on Thu, 05 April 2007 17:37
But image chooser ctrl still absent in the icon editor

Guido

Which Package do you use?

Luigi has the i386 and i use the amd .deb package so both seem to work. the rpms are build by using the .deb files.

please check the version (Assist->About) should be 2007.1rc5

It might be possible that the SplitterFrame got stored the wrong value into config file. Either try to move the splittler or delete confing file (in .theide dir).

Mirek

Indeed

But I just noticed I can do funky things with the project directory view's splitter. I can drag any number of splitters inside the frame, like on the attached screenshot. They are gone by the next refresh and can not be moved once released, so it is quite harmless.

Guido

Interesting. Looks like repainting bug (this lines are to set number of columns; they should disappear when mouse is left).

I have briefly tested with ubuntu feisty / gnome, no problem. Any hints what could be different?

That is quite unlikely - the "method" is repaint the line area after mouse-up (without the line, of course). Not sure how Beryl could influence this...

Mirek

Well, I tried under xfce4 and there behaviour is somewhat different. The line stays, when I release the button, but I can't draw multiple lines. When I drag the splitter again, the first line disappears. The screen-shot was with the not so popular EDE/edwm. I know this wm does have issues, but xfce on the other hand is quite big - a million users, or so I've heard. No. 3 X11-desktop for certain.

The splitter line is supposed to disappear, as soon as I release the mouse button on it? If this is

the intended behaviour, I suspect it works by coincidence/side-effect only, in the setups where it actually works that way. It COULD be window-manager bug. But xfce is wide-spread enough that I don't think so.

I wouldn't want the release delayed further because of that. But we should track that down. Maybe you are relying on some obscure or recent feature, non-ubiquitous. Any idea which is the window-manager hint in question?

Guido

Well, it is a little bit more complicated:

First of all, it is not exactly the splitter line. It is just indication that you are changing the number of columns. This "indication" is drawn as light-cyan line.

Then there also is a graphical black line that separates columns. In fact, this line can be equal to "indicator" if indicator is at "exact position" - as we are setting a number of columns, only certain positions are allowed...

So if what you see as remaining is a black line, everyting is OK.

It is however rather strange as WM bug either...
