I do personal programming only and have been looking for something to replace my VC++6, Qt lashup. Tried wxPython, too slow. wxDev-C++, the debugger is the pits. Yesterday I stumbled across U++ and downloaded it immediately.

This morning I fired it up, did the PromptOK("Hello World"); bit, the blank window. the decorated window, and was typing in the 'Magenta Hello World' thing, when my computer crashed. Even though I've downloaded a lot of questionable programs and written even more myself, that is a rare event. I got the blue screen and when I got it restarted, this was the explanation:

RTHDCPL.EXE - Illegal System DLL Relocation

The system DLL user32.dll was relocated im memory. The application will not run properly. The relocation occurred because the DLL

C:\WINDOWS\system32\HHCTRL.OCX

occupied an address range reserved for Windows system DLLs. The vendor supplying the DLL should be contacted for a new DLL.

Anybody recognize this? Please let it be a passing glitch, I desparately need a new programming system.

Anybody recognize this?

No. Moreover, U++ does not install anything outside its directory (except record for uninstallation in registry) and does not uses any ocx controls.

Have not you installed some other application recently?

According to this link

<http://www.liutilities.com/products/wintaskspro/dlllibrary/h hctrl/>

it is Windows help related, but U++ is not using Windows help either...

P.S.:

<http://www.bleepingcomputer.com/startups/RTHDCPL.EXE-13554.html>

Anything about sound?

No, nothing involving sound. Windows help...umm..

I was using TheIDE at the time, but I had several other programs open, it really could have been anything I guess.

When I restarted U++ it had lost my last little bit of typing, but otherwise everything seems to be working okay.

I naturally suspected U++ because I had just downloaded it yesterday and was using it at the time, but yes, I have downloaded other programs recently. As I said I'm looking for a new programming system and I have downloaded all kinds of stuff ... it's a wonder the thing runs at all. Thanks. Let's all just 'move forward' undaunted.
