Subject: Upp 2007.1 released
Posted by unodgs on Wed, 11 Apr 2007 06:52:12 GMT

View Forum Message <> Reply to Message

Finally there is, long awaited new version of Ultimate++ : 2007.1
Thank you all for testing, comments and bug reports.
There are lots of improvements since 605:

 "Chameleon" skinning system which allows both native look&feel of U++ applications across platforms and custom skins
to be designed/used. Gtk is used on X11 platforms
 Raster image infrastructure completely reworked
 New useful widgets: GridCtrl, CalendarCtrl and DateTimeCtrl
 Sql expressions are now dialect-adjusted before being executed on particular RDBMS target
 Library moved to Upp namespace
 Experimental PocketPC support was introduced
 Library fixed to support ARM and PowerPC CPUs
 A lot of new documentation and tutorials
 New Icon designer (supports alpha channel and has tools to produce antialiased icons)
 Features missing in X11 now implementd (Pdf export, printing, tray icon, OpenGL)
 Many minor improvements and bug fixes

PS: For those who use rc5 - there is no need to upgrade - this is the same release with version changed.
PS2: Linux packages should appear very soon.

View Forum Message <> Reply to Message

I am a bit late... I have just spotted one bug with rc5 with the following code:

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

struct TestResize : public TopWindow
{
 TestResize() {
  AddFrame(status);
  AddFrame(sb);
  Sizeable().Zoomable();
  sb.Set(0, 2, 10);
 }

 StatusBar status;
 HScrollBar sb;
```

```
};

GUI_APP_MAIN
{
 TestResize().Run();
}
```

If you resize the window by dragging the BR corner and then you move the mouse pointer on top of the ScrollBar L\R arrows then it starts moving...

My environment is:
- Windows,
- MSC8

If you resize the window by dragging the BR corner and then you move the mouse pointer on top of the ScrollBar L\R arrows then it starts moving...

My environment is:
- Windows,
- MSC8

Funny bug. Fixed, however, release stays.

Quick fix:

Quote:
```
void SizeGrip::LeftDown(Point p, dword flags)
{
 TopWindow *q = dynamic_cast<TopWindow *>(GetTopCtrl());
 if(!q || q->IsMaximized() || !q->IsSizeable()) return;
#ifdef PLATFORM_WIN32
 HWND hwnd = q->GetHWND();
 if(hwnd) {
  ::SendMessage(hwnd, WM_SYSCOMMAND, 0xf008, MAKELONG(p.x, p.y));
  ::SendMessage(hwnd, WM_LBUTTONUP, 0, MAKELONG(p.x, p.y));
 }
#endif
```

Maybe we should release from time to time fixed releases like 2007.1.R2? But that would require to maintain two trees in uvs, last released and current one.

Or you can keep a list of patches in an auxiliary directory that are numbered (01_SizeGrip.patch 02_Im_getting_a_clue.patch 03_now_a_life.patch ...). That way you do not have to keep/track separate release branches.

Anyway, as soon as upp finishes building I will post the gentoo portage ebuild to sourceforge (with version upp-2007.1-r1 including the above patch; not that I or anyone else cares)

Going further, TheIDE could connect the network and check for *.patch'es, download them and merge with uppsrc. That would be great and fastest way to fix anything.

I am afraid we cannot afford to this this yet, if we do not want to take risk about sending bad
patches... You would need better infrastructure to support this than we have now.

At the moment, somebody maintaining U++ 2007.1 release would be great.

Ummm... a live build system is a scary thing. To really support that, sanely, you need to be able
to override the defaults (exclude/require patches) for any particular version of the codebase.
Which means extending the current build system to include optional patches and specific
versioning support... a WHOLE lota Work.

View Forum Message <> Reply to Message

I was thinking about somehting much easier For example theide stores the information about
version of uppsrc somewhere. The patches also have proper signature so you won't be able to
install old patch to the new version. After merging your local version is updated to base version +
info about all installed patches. Having this you can add to patch_xxx signature that it require
patch_yyy to be installed first and so on. That should be quite easy to implement.

OTOH, if the ide was fully integrated with svn/git, merging patches would be trivial I suppose.

I'll have to think about it... My most recent experience with build systems like this is of course with portage. I've heard about nice GUI front ends for portage. Maybe that is an option (because you can actually control which patches are added, which versions of libraries, etc.) BTW, that is what motivated my comment a month or two ago about "slots" -- which would provide a mechanism to manage multiple (possibly installed) versions of the source trees.

Still scary

I think maintaining list of patches is basically just as difficult as doing a branch in versioning system, actually probably even more prone to go wrong.

What about simply branching 2007.1 in svn and keep patches there?
Anything usefully can be merged later upstream into uvs for new release. And other people interested into bug fixes for known release bugs will be able to get patches from svn repository.

Doing a branch is couple of minutes, and the trunk may remain in the sync with uvs development version, just like now.
And anyone interested into stable release may take it from branch, with or without any patches.

Overall I think too many living versions are not a very good idea, it may be quite confusing in forums and support.
IMHO it's better to release stable version more often and fix bugs there, rather than having stable, stable+patched and development (especially with development version as far from stable as 2007.1 was from 605). Even if the price for this will be some minor bugs in every "stable" release. Those can be patched afterwards like now, or the affected user can wait for another release if it will be out soon enough.

Subject: Re: Upp 2007.1 released

View Forum Message <> Reply to Message

Agreed. There are two issues here -- the first being U++ itself, and the second being integration into u++ to help manages all source. The former only requires the developers to maintain it, but the later would require some interface to hide the functionality from the users.

Other than that I was playing with unodgs idea))

I agree.

In fact, in this respect, "development" proved to be a double-edged sword. It is excellent for having everything tested soon, but it got us lazy about releasing "majors".

I agree. What I had in mind and I was brainstorming above is how to deal with supporting projects that in essence uses legacy code in the same IDE. If we set up a CVS/SVN/etc. tree with branch tags, we can use those as what I have been calling named slots. From there the package organizer would have to know what slot/branch tag is being compiled against (uploading if necessary). The same mechanism would allow the developers to set up special branch tags or aliases for LIVE, CURRENT-STABLE, CURRENT-DEVEL, as well as upp-605-stable.

Just some thoughts following on from which at this point has gotten WAY off Topic

luzr wrote on Thu, 12 April 2007 07:36

How about starting a list of things that you or others want to see for the next revision/release? That way as we tick off the tasks we know when it is reasonable to call for a new release/revision. anything else that made it in is gravy, and if there has been WAY tom many minor changes but the revision issues are not resolved, then maybe it can be called a subrevision or the remaining issues can be put off to the next cycle

Just some thoughts...

I have Xubuntu 6.10
bunch of problems, here

a) deb package misses to install gdb, so when upp is asked to debug a program it correctly tells it had an error invoking gdb, but after that it exits immediately.

b) If I try to run reference/Paint it fails this assertion

Executing: "/home/da/upp/out/GCC.Debug.Gui.Shared.So/Paint"
Assertion failed in /home/da/upp/uppsrc/Draw/DrawX11.cpp, line 372

i >= 0 && i < 4

When I try to debug it when upp encounters the problem it doesn't go to the error line, it only displays the assembly trace. Is it normal? The function copy backtrace copies a void string, too (the disass copy works)

```
FFFFE400  push ecx
FFFFE401  push edx
FFFFE402  push ebp
FFFFE403  mov ebp,esp <-- here is the problem
FFFFE405  sysenter
FFFFE407  nop
FFFFE408  nop
FFFFE409  nop
FFFFE40A  nop
FFFFE40B  nop
FFFFE40C  nop
FFFFE40D  nop
FFFFE40E  jmp 0xFFFFE403
FFFFE410  pop ebp
FFFFE411  pop edx
FFFFE412  pop ecx
FFFFE413  ret
FFFFE414  nop
FFFFE415  nop
FFFFE416  nop
FFFFE417  nop
FFFFE418  nop
FFFFE419  nop
FFFFE41A  nop
FFFFE41B  nop
FFFFE41C  nop
FFFFE41D  nop
FFFFE41E  nop
FFFFE41F  nop
```

----
c) Keys to set bookmarks don't work. I have an italian keyboard.
When pressing Control + Shift + 0 I get this in AK Setup
Ctrl+Shift+[=]
When pressing Control + Shift + x (x is a number bar 0) I get
Ctrl+Shift+1002x

Please make this work or let user set his own bookmark keys otherwise working in Linux without bookmarks is gonna be hard...

d) well, this is not a real problem, but on Linux I really like the middle-click paste after selection,

and I miss it a lot in upp...

Ciao,
David

I can confirm this bug.
Apparently you are the first Linux user to try the Paint example

What happens is, that DrawEllipse() defaults to Null for the pen size. Null = INT_MIN = -2^31. This
Value then gets passed to void Draw::SetLineStyle(int width), which can not handle it.

Some if(IsNull()) statement missing in SetLineStyle()?
Does upp not use the default pen on Windows in this case, or how has that gone amiss?

Guido

Thank you. Fixes:

```
void Draw::DrawEllipseOp(const Rect& r, Color color, int pen, Color pencolor)
{
 DrawLock __;
 SetLineStyle(pen);
 if(!IsNull(color)) {
  SetForeground(color);
  XFillArc(Xdisplay, dw, gc, r.left + actual_offset.x, r.top + actual_offset.y,
   r.Width() - 1, r.Height() - 1, 0, 360 * 64);
 }
```

```cpp
 if(!IsNull(pencolor) && !IsNull(pen)) {
  SetForeground(pencolor);
  XDrawArc(Xdisplay, dw, gc, r.left + actual_offset.x, r.top + actual_offset.y,
   r.Width() - 1, r.Height() - 1, 0, 360 * 64);
 }
}
```

....

```cpp
void Draw::SetLineStyle(int width)
{
 DrawLock __;
 if(IsDrawing()) return;
 if(width == linewidth) return;
 linewidth = width;
 if(IsNull(width))
  width = 1;
 if(width < PEN_SOLID) {
  static const char dash[] = { 18, 6 };
  static const char dot[] = { 3, 3 };
  static const char dashdot[] = { 9, 6, 3, 6 };
  static const char dashdotdot[] = { 9, 3, 3, 3, 3, 3 };
  static struct {
   const char *dash;
   int   len;
  } ds[] = {
   dash, __countof(dash),
   dot, __countof(dot),
   dashdot, __countof(dashdot),
   dashdotdot, __countof(dashdotdot)
  };
  int i = -(width - PEN_DASH);
  ASSERT(i >= 0 && i < 4);
  XSetDashes(Xdisplay, gc, 0, ds[i].dash, ds[i].len);
 }
 XSetLineAttributes(Xdisplay, gc, max(width, 1),
             width < PEN_SOLID ? LineOnOffDash : LineSolid, CapRound, JoinRound);
}
```

Hm, maybe we can keep the system simple: I will accumulate critical patches here and perhaps
we can make something like 2007.1a based on them when they reach some critical mass...
(means, somebody will apply them to 2007.1 sources).

View Forum Message <> Reply to Message

I had a few moments to start playing around with Scatter and found that I could not set any breakpoints with the debugger. Has anyone else see this behaviour?

The error reported back is:
   b <path to sourcefile>/Scatter.cpp:909
   no source file named <path to sourcefile>/Scatter.cpp

The source file does exist at the specified location, but GDB cannot find it. Did something break in 2007.1 on in the patches that were posted? I'm rebuilding u++ without the additional patches. I'll report back just in case one of the patches is the culprit.

Build with "Full debug info" - usually that is the problem.

Actually, this is sort of stupid and funny at the same time.

The trouble is that with debug info enabled, the most common Linux - Ubuntu, has broken "ld" and linking with debug info takes minutes. Therefore full debug info is disabled by default.

Mirek

Thanks. The thing that threw me was that it was working before the update (so something that I did violated the law of unintended consequences   I'll have to play with it some more since much of my focus over the weekend was spent on diagnosing a potentially dieing laptop 8-(

One of the things I tried was to add a "-g" to the debug options. I do not know if that is what made the difference or what yet...

One more patch:

IconDec/Image.cpp

```
void IconDes::SmoothRescale()
{
 if(!IsCurrent())
  return;
 WithRescaleLayout<TopWindow> dlg;
 CtrlLayoutOKCancel(dlg, "Rescale");
 dlg.cx <<= dlg.cy <<= dlg.Breaker();
 Slot& c = Current();
 BeginTransform();
 Image bk = IsPasting() ? c.paste_image : c.image;
 dlg.cx <<= bk.GetWidth();
 dlg.cy <<= bk.GetHeight();
 dlg.keep <<= true;
 for(;;) {
  Size sz(minmax((int)~dlg.cx, 1, 9999), minmax((int)~dlg.cy, 1, 9999));
```

```
if(IsPasting()) {
 c.paste_image = Rescale(bk, sz);
 MakePaste();
}
else {
 c.image = Rescale(bk, sz);
 Refresh();
}
SyncImage();
SyncShow();
switch(dlg.Run()) {
case IDCANCEL:
 if(IsPasting()) {
  c.paste_image = bk;
  MakePaste();
 }
 else {
  c.image = bk;
  Refresh();
 }
 SyncImage();
 SyncShow();
 return;
case IDOK:
 return;
}
if(dlg.keep) {
 if(dlg.cx.HasFocus() && bk.GetWidth() > 0)
  dlg.cy <<= (int)~dlg.cx * bk.GetHeight() / bk.GetWidth();
 if(dlg.cy.HasFocus() && bk.GetHeight() > 0)
  dlg.cx <<= (int)~dlg.cy * bk.GetWidth() / bk.GetHeight();
}
}
}
```

(Otherwise there is crash when Cancel button is pressed).
