Hi,

I'd like to do a little GUI app with a layout file using GridCtrl.
Therefore I took a basic GUI example app (AddressBook) and deleted all stuff I don't need.
Then I added GridCtrl package to my project.
The problem now is that I don't see GridCtrl in layout designer and I also get lots of errors when compiling GridCtrl package.

It seems to be something stupid, but I don't know what .

System: WinXP, upp2007.1, MingW 4.1.1

Project is attched.

Matthias

P.S.: Homebudget project compiles fine using same build method.

Works fine for me using MSC8. Have you tried re-downloading the sources? It seems like your GridCtrl package might be messed up, because it should definitely be available in the designer.

Otherwise you'll need to post the compilation errors from GridCtrl to get a more useful answer.

Hi,

as you already assumed, it really was my installation.
I installed upp before GridCtrl was integrated and updated only the sources.
Using a fresh install solved the problem.

Thanks,
Matthias
