Subject: UWord Speller and 'Whats This?'

Have compiled Uword using 2007.1rc2. The spell facility does not appear to work. Nothing gets underlined.

Are there any files which need to be on the susyem to make it work?

Also under Help/Whats This? the facility does not do anything.

But when activated Uword crashes on closedown with:

Error C00000005 @ 45193a Exception access violation reading at FEEEEFF38.

What should 'Whats This' Do?
