Subject: howto clean up generated test data?

I have a couple of integrated test suites that I have cobbled together with U++...

These test suites often generate temporary files/data that have to be visually inspected. Once verified, is there a way to add them to a list of files to "clean" or be removed? I've poked around the docs a little and do not see anything obvious...

Thanks and best regards,

EBo --

I am not sure I understand. What should clean them? TheIDE?

I have hand coded Makefiles that generate temp data files, etc., as part of their unit testing. I was curious if there was a way to do this with theIDE.

Well, TheIDE philosophy is to never mix files that can be generated (object files, binaries etc...) and sources. So there is only a little need to care about this, I just from time to time delete the whole out directory....

I came to about the same conclusion... What I did for the specific problem I was dealing with is to pop up a graphical display with the generated images as part of the unit/regression testing. That way I can keep it where ever and unlink it at the end.

Is there some way to easily get at the UPPOUT variable from a user program? Is it set in the environment, or otherwise accessibly?

Thanks and best regards,

No, never came on my mind

You can check for exe directory I think.
