Subject: pre-define for preprocessor

Hi,

Sorry for this newby's question... I'm looking for the way to have defines for the preprocessor in the project options. I looked at Project->Package organizer, but could not find how to do... Or maybe it's not the right way ?

In fact, to use a library, I have to define LIB_WIN, LIB_LINUX or LIB_DARWIN according to the target OS. How can I do that ?

thanks.

Hi,

you can define a compiler option -Dxxxx in the package organizer dialog which is then added to the command line.

Matthias
