Subject: Page Break Key Stroke in UWORD and RTF conversion

Is there a page break key sequence in UWORD?

I notice that there is a 'Ctrl/Enter' in kbd.cpp but cannot figure out what it does.

Would like to see one in there.

Also

I have coded "[P]" for page break into an editor area by hand. This shows up as a page breake in Uword.

This translates to a page break when the sequence is exported to pdf.

It appears to be ignored if the sequence is exported to rtf.

You can force page break in Paragraph properties.
