Subject: Project Euler - funny math problems to be solved

Hello all,

in recent days I'm trying to solve the problems on
http://projecteuler.net
(with the help of UPP)

But beware, if you love such things, it may seriously harm your performance in work/life because it's quite addictive. (I do have so far only 40 problems solved from 152, and the more difficult problems require much more time to think and solve than the first ones)

Maybe you already know this, but if you're interested in math wxMaxima (the wxWidgets front-end to Maxima) is a really nice open source program to do symbolic computation. I get always surprised when it solves indefinite integrals!
http://wxmaxima.sourceforge.net/wiki/index.php/Main_Page

MathDragn http://mathdragn.squarespace.com/ is nice to perform algebra manipulations, too.

Ciao,
David
