When i use this code:

String AppPath = GetFileDirectory(GetExeFilePath());
PromptOK(AppPath);

i got an output like this:

c:path1path2path3

this is the complete path without backslashes. How can i get the complete applikation-path with backslashes?

Michael

Write PromptOK(DeQtf(path)). All Prompt like functions use qtf string to display the text and some specials chars like slash are eaten by qtf parser.

Ok, thanks. This means the path is correctly saved in my variable AppPath but only transformed by PromptOK?

PoromptOK accepts formatted text in QTF format. So you can put bold, italic, etc texts, tables and

many nice things in your message boxes. You can study QTF format using help in theide.
You can edit QTF files with uword.
