Changelog:

 many Drag & Drop improvements. All edit controls as well as TreeCtrl and ArrayCtrl now support
it.
 ArrayCtrlDnd reference was added
 fixed MaxLen restriction in edits.
 PostgreSQL now supports EnumView, EnumSequences and EnumTables. GetColumns should
also work.
 InnerJoin, LeftJoin, RightJoin, FullJoin and On methods were added to SqlExp interface to allow
do joins in sql-92 way. Old way (which work only in Oracle (and probably in Firebird)) are naturally
still available.
 as MinGW does not support TLS variables, it now compiles as "USEMALLOC" in MT mode
 IconDes: Insert from file operation was added

Linux releases are still not possible due to lack of Dnd support.

Bas

DnD is really great!

Change needed for MinGW

Image ReadClipboardImage()
{
 PasteClip pClip = Ctrl::Clipboard();
 return GetImage(pClip);
}

I agree!

Quote:

Change needed for MinGW

Image ReadClipboardImage()
{
 PasteClip pClip = Ctrl::Clipboard();
 return GetImage(pClip);
}

Confirmed.
Moreover I run UWord under mingw and got similar problem. The fix is the same (file Clip.cpp):

void RichEdit::Paste()
{
 if(IsReadOnly())
  return;
 RichText clip;
 PasteClip pClip = Ctrl::Clipboard();
 if(!Accept(pClip, clip))
  return;
 ClipPaste(clip);
}

Luigi

hi

TreeCtrl doesn't show correct image(icon) of element, because
in TreeCtrl.cpp in line 823 is used bad value of Rect r

possible patch:

```
--- TreeCtrl.cpp        (revision 57)
+++ TreeCtrl.cpp        (working copy)
@@ -820,6 +820,7 @@
                    bg = hasfocus ? SColorHighlight : Blend(SColorDisabled, SColorPaper);
                }
                if(!(m.ctrl && m.ctrl->IsWantFocus())) {
+                   r.SetSize(isz.cx, 0);
                    w.DrawRect(r, bg);
                    d->Paint(w, RectC(x + m.margin, y + (msz.cy - vsz.cy) / 2, vsz.cx, vsz.cy),
m.value,
                        fg, bg, st);
```
