I tried to build for Winx64 with MSVC8

I fight for 2h for compile my App with succes but

I canot link for x64 it shows me that target machine x86 conflicts with x64

Any suggestions ?

1)

There is a lot wrong size casts

C:\upp\uppsrc\Core/String.h(625) : warning C4244: 'argument' : conversion from '__int64' to 'int', possible loss of data

C:\upp\uppsrc\CtrlLib\LineEdit.cpp(231) : warning C4244: 'argument' : conversion from '__int64' to 'int', possible loss of data

C:\upp\uppsrc\CtrlLib\DocEdit.cpp(58) : warning C4244: 'argument' : conversion from '__int64' to 'const int', possible loss of data

but i can handle this

2) I had to correct many things in Core like assembler inlines

but i started from this

```
#ifdef PLATFORM_WIN32
```

```
#define DIR_SEP "\\
```

```
#define DIR_SEPS "\\\"
#define PLATFORM_PATH_HAS_CASE 0
#ifndef PLATFORM_WINCE
#include <io.h>
#endif
#ifndef PLATFORM_MFC // just mini Windows headers
#ifdef COMPILER_MSC
#ifndef CPU_ARM
#ifndef _AMD64_
#ifndef _X86_
#define _X86_
#endif
#endif
#endif
#endif
#endif
```

I have inserted here

`#ifndef _AMD64_` before `#define _X86_` and i added `-D _AMD64_` to compilation flags

At the end of succesfull compilattion

Linking...

C:\upp\out\MapMaker\MSC8x64.Debug_full.Gui.Main\\$.blitz.obj : fatal error LNK1112: module machine type 'x64' conflicts with target machine type 'X86'

There were errors. (0:23.85)

Is You can see earlier file i supplied in configuration, paths to x64 linker and compiller

I think there is lack of support for x64 in msvcbuilder.cpp
and IDE tries to link for x86 with x64 linker or something

Any suggestions how i can build for WIN64 with AMD64

PS. You dont have to have x64 windows to build for it, just download PlatformSdk and use
x86_64 croostools

Hi,

It is great to hear this. I was planning this (Win64) support for some time but never really got to that. However, I believe it should be quite simple now, as it works in 64-bit Linux without problems.

I believe that solution to the problem will be the introduction of new "MSC8_64" builder with fixed linker options. I believe it should be possible for you to do this; for starters search for "MSC8ARM" in uppsrc, that will reveal all places where original "MSC8" builder had to be fixed to support PocketPC... (and then please report patches

Mirek

MapMaker: 20 file(s) built in (0:11.07), 553 msec / file, duration = 15562 msec, parallelization 99%

Linking...

C:\upp\out\MSC8x64.Debug_full.Gui\MapMaker.exe (5278720 B) linked in (0:09.40)

OK. (0:21.93)

Thanks for Help
works

Could You include changes in future releases of TheIde ?

Ide hopefully fixed (but you have used somewhat older version, so I hope I have merged it OK).

I will have to download x64 compiler soon to fix the rest.

Thanks.
