Subject: Exporting QTF to RTF and HTML (Uword)

When exporting QTF documents to RTF (and HTML) any embedded page breaks do not get translated to page breaks in the RTF (or HTML) document.
They are correctly expanded when a pdf file is produced.

A zip file with a modified Uword example and qtf/rtf/pdf/html
source and generated files is attached.

Any suggestions as to how to get the RTF correctly generated would be appreciated.

Is there a page-break in HTML?

Mirek

I too don't know what HTML does with the page break. It is the RTF which is of real concern. It too fails to convert page breaks into the RTF equivilent unlike PDF which performs correctly. The earlier attached files show the problem.

Ignore HTML, I was only trying to give helpful information.

Working on it (plus RTF unicode support).

Any progress with the exporting of QTF to RTF (page break problem)?

Well, Tom is working on it, but is stuck - his RTF looks exactly the same as the one from Word, but Word for some reason ignores the page break

Working on it....

Mirek

UPDATE: I was informed that export already works, import now ignores "end of page" character (but understands "break page before paragraph") which will be fixed soon.

Any progress with export and import?

Also where can I get the updated source from?
