Well, D&D stuff was perhaps a little but unexpected, but together with massive improvements in Core I think it is a good idea to consider 2007.2 "major" version.

Therefore I suggest this near future development plan:

- Finish DnD by implementing X11 port
- Make major improvement in TheIDE/Topic++ (something really special, will make documenting much more productive).

the release 2007.2 RC.

While 2007.2 is "cooking", resume the work on Mac OS X (this is mostly idependent from active sources tree).

Mirek

Sounds interesting. If it's not a secret could you shed some light on it..

Sounds interesting. If it's not a secret could you shed some light on it..

Step 1: Move Topic++ to theide main window (like designers were moved some time ago). Topic groups will appear as items in the package file list.

Step 2: Place small icon to the left bar of source text at each entity declaration/definition. Moving

mouse over it will show Topic++ info about the item, clicking it will edit (or add) this info.
