Hi,

I'm not sure where to put this message so I put it here.

The problem is that when I try to compile hello world example from here
http://irrlicht.sourceforge.net/tut_devcpp.html
I get this error message:

```
----- RallyGame ( MAIN GCC DEBUG DEBUG_FULL BLITZ WIN32 )
Linking...
(option '-O 2' ignored)
__main: duplicate
-> used:      libmingw32.a:gccmain.o:1
-> discarded: libgcc.a:__main.o:1
1 undefined symbol(s):
__imp__ZN3irr12createDeviceENS_5video13E_DRIVER_TYPEEERKNS_4core11dimension2dliE
EjbbbPNS_14IEventReceiverEPKc (referenced from c:\upp\out\
rallygame\mingw.debug_full.main\helloworld.o:1; _main;
__static_initialization_and_destruction_0(int, int); __static_initialization_and
d_destruction_0(int, int); ...)
linking aborted due to fatal errors
collect2: ld returned 1 exit status
```

There were errors. (0:02.38)

I added E:\irrlicht-1.3\include to include and E:\irrlicht-1.3\lib\Win32-gcc to lib, there already is mingw\lib and \include.

Is the solution to use libgcc.a instead of libmingw32.a and how to accomplish this?
