Hello! If I try to run theide in Linux from a vnc session theide idle (I need to kill it) and I get a lot of Xerror:BadValue. Is there any way to run theide from vnc session?. Is it a chameleon error?

Thanks a lot.

I guess this is the new thing to consider, I think nobody tried VNC so far....

Somebody to check?

I'm interested in checking this, but I'm in the middle of some hardware stuff at this red-hot (which actually WAS red, and smokey, and smelly, when I revers wired a protoboards... AAARRRGGG)

What are the server and client OS's?

I use vnc a lot, with U++ too. Windows builds I vnc home to compile, or from home to OsX for the opposite.

It generally works fine here, one of the problems is that using F-keys to compile and what not generally doesn't work, as it often sends double/tripple key-strokes. Using the menus is ok.

I use all combinations of OsX, NetBSD and Windows with vnc. No Linux though.

I have Debian etch with vnc 4.1.1 server and client and when I execute the ide or a compiled example like chameleon I get a lots of warning and the program idle and I need to kill it.

X Error: BadDrawable (invalid Pixmap or Window parameter), request: X_CreateGC, resource id: 23071077 = 1600965

X Error: BadDrawable (invalid Pixmap or Window parameter), request: X_PutImage, resource id: 23071077 = 1600965

X Error: BadGC (invalid GC parameter), request: X_FreeGC, resource id: 23071078 = 1600966

X Error: BadPixmap (invalid Pixmap parameter), request: X_FreePixmap, resource id: 23071077 = 1600965

X Error: BadValue (integer parameter out of range for operation), request: X_CreatePixmap, resource id: 24 = 18

I am going to try FreeNx.

Best Regards

Well, U++ now requires Xrender / Xft could it be related?

Yes look like that. I have installed freenx with Xft support and all works fine. I will use freenx no vnc.

Thanks a lot

I have used every combination of VNC client-server between Linux, Windows, and Mac OS.

I have not had any issues that I could directly attribute to theide.
