QuickTabs were refactored:

+ new look (it's copy of firefox tabs..)
+ tiny scrollbar at bottom instead of left/right buttons
+ drag and drop
+ ctrl & mouse scrolls tabs (in case of problems with hitting the scrollbar)

This is not the end of changes. I have some more ideas. If you have them too please write about them here.

Nice.

Can we have the middle mouse button closing tabs please. It's much more efficient than having to find the little X.

The new tabs look very nice!
I vote for the middle click, too.

Fixed crash when left clicking outside tabs
Fixed highlighting when mouse goes outside tabs
LMB + alt allow to drag tab without activating it

Could you please provide the patch? (I have crashing version).
Also:
How to build Ultimate++ on Windows from scratch - from svn code ?
I couldn't find any makefiles/projects in downloaded folders.
Thanks in advance,
Wiktor

I do understand.Thanks.
Does the same applies to the ide?
I can build it , but it crashes on start-up.

+ QuickTabs now support grouping by package
+ compatibilty with MouseMiddle
+ active tab has blue outline (somthing to discuss)
+ file icons are back
- fixed some rare bugs
